## GOSystems - Outbound logistics

# GOSystems can improve your finished goods management!

## Are you dealing with:

- Inaccurate stock levels?
- Conflicting information on product age and rotation?
- Inaccurate packing information?
- Incorrect labels?
- Late orders from sales?
- Stock shortages?
- Delivery delays?

All the above can be very frustrating, not to mention costly.

Everyone wants to have their stock and orders under control, and their production schedules and deliveries to run like a finely timed engine. You want to be able to react to issues quickly and avoid wasting valuable time reviewing things manually.

Our GOSystems software helps take the frustrations out of finished goods management by making complicated tasks simpler and easier to manage.

# GOSystems for manufacturing execution

## Produce easily and directly to orders

Meet crucial delivery times while ensuring accuracy and efficiency throughout production. GOSystems ensures that your raw materials are used as effectively as possible according to the current order status and production capability. It helps you shorten your response time to production or order changes. It offers complete support for complex ordering, packaging, and palletizing. Producing only what is on order also makes it easier to prioritize sales and production orders.

## Gain full control of your warehouse management

Know your stock levels at any given time. GOSystems gives you full control and visibility of your raw material, work in progress and finished goods inventories in real-time, providing you with an extensive overview of your products and stock status. Performing inventory transactions with online mobile scanners ensures real-time information.

## Simplify your labelling demands

Manage all your labels, printers and settings centrally from your office. Our GOSystems label system provides a label designer with user friendly features for setting up text fields, barcodes, and images. You can put all the information you need on a single label and use the same product on different orders. Once you have designed a label and assigned it to a product, a customer or an order, GOSystems does the rest.

# Reduce losses and optimize your product age level

Know your critical data at all times, including product age, expiry dates and time on stock. GOSystems ensures constant, direct access to this valuable information that can reduce losses on expired products and optimize the product age level. GOSystems assists you to set up and receive real-time alarms and notifications of expiry times and dates.

## Maintain product traceability

Trace every product from source to shelf. This ensures that you can act quickly if any issues arise, to minimize potential recalls and any monetary impact.

GOSystems is able to record every process step based on individual animal or batches for all production processes from reception to dispatch. GOSystems uses various logical process areas to link all these elements together into one traceability chain. Accurate traceability allows you to assure customers of the correct price, quality and safety of your products.

## Optimize your finished goods delivery

Order pick, palletize, and ship products more efficiently. GOSystems enables you to build pallets directly to orders for single or mixed products, assign products to sales orders, assign orders to shipments and create final dispatch documentation. GOSystems solutions are able to report which products, packs and pallets have been dispatched, when, where, on which order, and by whom.

# FRONTMATEC

Frontmatec develops world-leading customized solutions for automation in the food industry, other hygiene sensitive industries and the utilities industry. We are especially renowned for our high-quality systems for the entire value chain of the meat industry – from carcass grading, slaughter lines, cutting and deboning lines, hygiene systems and control systems, to logistics and packaging.
